LETTER OF TRANSMITTAL.

UNITED STATES DEPARTMENT OF STATE,
WAR TRADE BOARD SECTION,

Washington, February 17, 1921.

SIR: There is submitted herewith a report prepared by Charles S. Hawes, research assistant, on foreign coal-tar dyes for which import licenses were granted by the War Trade Board during the fiscal year ended June 30, 1920. This report does not show actual importations effected during that period as, of course, the use of an import license is not mandatory, except to cover actual importations.

In submitting this report, I think it only fair to mention that Mrs. Florence Burlingame has been actively engaged in its preparation and by her careful, painstaking work and close application to detail, has added much to the value of the report.

Respectfully submitted.

F. S. DICKSON,

Acting Chief, War Trade Board Section.

To the Honorable BAINBRIDGE COLBY,
Secretary of State.

FOREWORD.

This report shows what foreign-made dyes the War Trade Board licensed for importation into the United States during the year July 1, 1919, to June 30, 1920, inclusive. It must be borne in mind, however, that all licenses issued were not used to effect actual importations, and importations could hardly have been effected during that period on licenses issued during May and June, 1920. This is clearly illustrated by comparing quantities in Table 2 with those shown in Table 14, page 60 of the United States Tariff Commission's Census of Dyes and Coal-tar Chemicals: 1919 (Tariff Information Series No. 22). As licenses were granted for dyes needed by actual consumers to meet their manufacturing requirements for a six-months' period, the figures given would seem to indicate the probable requirements of United States manufacturers in leading dyestuff-consuming industries of the country for six months from the date dyes were received. These figures also would tend to show what dyes should be added to the dye-producing program in this country in order to place the United States in a more independent position and to help free the country from the necessity of importing foreign dyes.

EXPLANATORY NOTES.

Every application for a license to import dyes of enemy make or origin was carefully scrutinized for the purpose of determining whether the particular dye for which an import license was requested, or a satisfactory substitute therefor, was being produced in the United States and was available to the consumer on reasonable terms as to price, quality and delivery. If the records of the War Trade Board showed that an identical color, or a satisfactory substitute therefor, was being produced in the United States and was available on those terms the license was refused.

It is obvious that most of the dyes in the following tables were either unobtainable from United States sources or if produced were not satisfactory for the use intended by the applicants for one or more of the reasons mentioned above.

Special attention is called to the fact that approximately 600,000 pounds of German dyes were bought and fully paid for prior to April 6, 1917, when this country entered the war, and were licensed for importation even though our records showed that the same colors were being produced in the United States.

The entries for names of colors show how applications were actually filed. For instance, some licenses were granted for powder and some for paste. In many applications neither powder nor paste was mentioned, although the dyes asked for were produced in both concentrations. When neither was mentioned, the brand was listed as shown in the application, but it has been assumed in all cases (excepting with respect to vat dyes) that the applicant wanted powder.

Frequently applicants for licenses classified the dyes desired under Schultz numbers, but the War Trade Board can not vouch for the correctness of these numbers in all cases. Every effort has been made to verify all such classifications, and it is believed that for the most part the dyes have been classified correctly in this list.

There were three principal reasons for granting licenses for the importation of German dyestuffs: (1) No production in the United States at the time license was granted; (2) production was insufficient to meet domestic requirements, and (3) manufacturers of dyestuffs failed to give the War Trade Board complete information concerning the dyes produced by them. In some cases licenses were granted for small quantities of dyes of enemy origin for research purposes, although such dyes were not licensed for commercial use.

This list shows colors for which import licenses were issued during the fiscal year ended June 30, 1920. Due to the constantly increasing activity of American dye manufacturers in producing new colors and perfecting others, many of the dyes included in this list would not now be licensed for importation if of enemy origin, as they are now obtainable from domestic manufacturers on reasonable terms as to price, quality and delivery.

COAL-TAR DYES FOR WHICH IMPORT LICENSES WERE GRANTED DURING FISCAL YEAR 1920.

The following table (Table No. 1) is a summary. It shows the total poundage, by classes, of all dyes given in Table No. 2.

TABLE No. 1.—*Foreign dyes for which import licenses were granted, with country of origin and quantity (pounds), by classes, fiscal year 1920.*

Class.	Germany.	Switzer-land.	England.	All other.	Total.
